

src/default\_configuration.cpp

```
graph TD; A[src/default_configuration.cpp] --> B[ci_example_cpp/default_configuration.hpp]; B --> C[ci_example_cpp/gains_configuration.hpp]; C --> D[string]; C --> E[iostream];
```

A flowchart illustrating the relationship between configuration files and standard library headers. It starts with a box at the top labeled 'src/default\_configuration.cpp'. A blue arrow points down to a box labeled 'ci\_example\_cpp/default\_configuration.hpp'. Another blue arrow points down to a box labeled 'ci\_example\_cpp/gains\_configuration.hpp'. From this box, two blue arrows branch out to two separate boxes at the bottom labeled 'string' and 'iostream'.

ci\_example\_cpp/default\_configuration.hpp
